

XtensionSM Hosted PBX

Advanced Calling Features Made Affordable

Used to be, you needed your own PBX system and T-1 line to give your business sophisticated voice and data services. Not anymore. With a Primus XtensionSM Hosted PBX, you don't need your own PBX system to get PBX-like calling features from priority alert to selective call acceptance to last number redial.

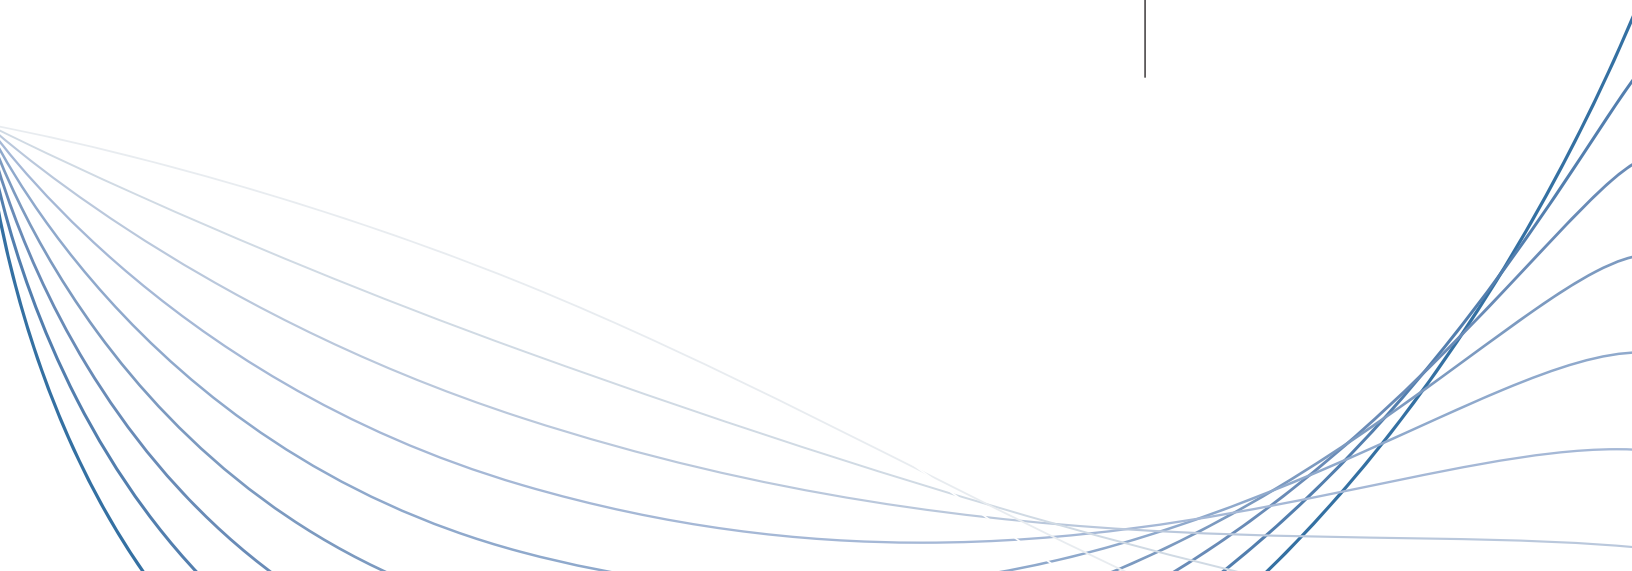

The Primus XtensionSM Hosted PBX will give you more than 20 advanced calling features and easier-to-use handsets. You can keep your existing phone numbers. You can also keep and use your existing broadband connection, whether cable or DSL.

We'll test your connection and can even upgrade its speed for a few dollars a month. Or, if your voice and data needs require it, you can upgrade to a T-1 connection with our sister product, XtensionSM Hosted Plus PBX.

Either way, you'll save money month after month and enjoy a highly reliable and productive business tool.

Want additional features beyond PBX? You might want to consider our Virtual Trunking product. See separate product sheet for details.

- KEEP YOUR EXISTING IP CONNECTION
- NO ON-SITE PBX SYSTEM REQUIRED
- ADVANCED PBX-LIKE CALLING FEATURES
- EASIER-TO-USE HANDSETS
- LOWER TOTAL COST OF OWNERSHIP
- UPGRADE TO A T-1 WITH XTENSIONSM PLUS

Primus VoIP service like XtensionSM Hosted PBX can give you added peace of mind.

With Primus VoIP, if your business offices become hard to reach, your customers and employees can still reach you. You can easily re-route your calls and features to another phone line, or another location and you can access your phone network from anywhere there is internet access.

"We need a phone company that keeps us "on the move". With Primus' XtensionSM solution, we get great features like Internet voicemail and remote login, plus terrific customer service – all for about half of what we were paying with our old phone company."

Virtual Trunking

All the Functionality of Traditional Business Trunking At a Lower Cost. More Valuable Features Than a PBX Alone.

Virtual Trunking from Primus means your business can support multiple inbound and outbound callers over a single, easy-to-manage trunk group that connects to your existing PBX or Key System. By combining all existing voice and data services onto one high-speed Internet connection, you can dramatically lower your total cost of ownership.

Value-Added Features That Help Make Your Business More Productive.

Primus' Enterprise Business Trunking not only supports all the calling functionality of your existing PBX, it gives you additional value-added features.

Network Recovery keeps your business up and running.

If your business offices become inaccessible, you can remotely re-route incoming calls to another phone number – without any disruption to your customers or suppliers.

- KEEP EXISTING IP CONNECTION
- KEEP EXISTING PBX AND HANDSETS
- ADDITIONAL FEATURES BEYOND PBX
- LOWER TOTAL COST

Network-Based Voice Mail keeps branch offices and mobile employees connected.

By enabling the Network Based Voice Mail option, you can provide all your branch locations and remote workers with a consistent, easy-to-use voice mail solution. Virtual Trunking service can also be configured to support your existing voice mail system, if you prefer.

Primus VoIP service like Virtual Trunking can give you added peace of mind.

With Primus VoIP, if your business offices become hard to reach, your customers and employees can still reach you. You can easily re-route your calls and features to another phone line, or another location and you can access your phone network from anywhere there is internet access.

Voice and conferencing solutions

We own our own robust global voice network for maximum reliability and affordability.

Primus offers a broad portfolio of voice services, ranging from traditional long distance and toll-free telephone services to international cell phone plans.

By leveraging the strength of our own robust global voice network, our customers benefit from clear connections and affordable voice service on a local and a global level.

Whether you are calling within the U.S. or internationally, Primus offers reliable quality, dedicated or switched long distance voice service.

By merging the functionality of the phone and the Internet, Primus allows your business to conduct meetings easily with any number of people in any number of locations.

Mobile Gateway. Make international calls from your cell phone more affordable.

Primus Mobile Gateway provides an alternative service from your cell phone service provider. Simply dial a local access number to our network. Primus automatically recognizes your cell phone number and allows you to make quality, affordable calls.

Data transport and connectivity

Primus High-Speed Internet.

The Fast, Affordable And Reliable Internet Solution.

Primus high-speed Internet connections can expand your business' global reach while improving communication, increasing productivity and reducing costs. Primus offers an array of high-speed Internet access bandwidth options from 256 Kbps up to 45 Mbps.

Optional speeds allow tailored solutions to fit your Internet access needs.

Primus optional speeds also enable you to easily upgrade your bandwidth as your business grows.

Primus high-speed lines offer secure and reliable Internet connections through a high-capacity Internet network. The Primus Global Network is monitored 24x7x365 by the Primus Network Operations Center. The bottom line: the Primus Global Network is available more than 99.9% of the time.

Primus Private Lines. Transmit your data securely using the latest encryption and authentication protocols.

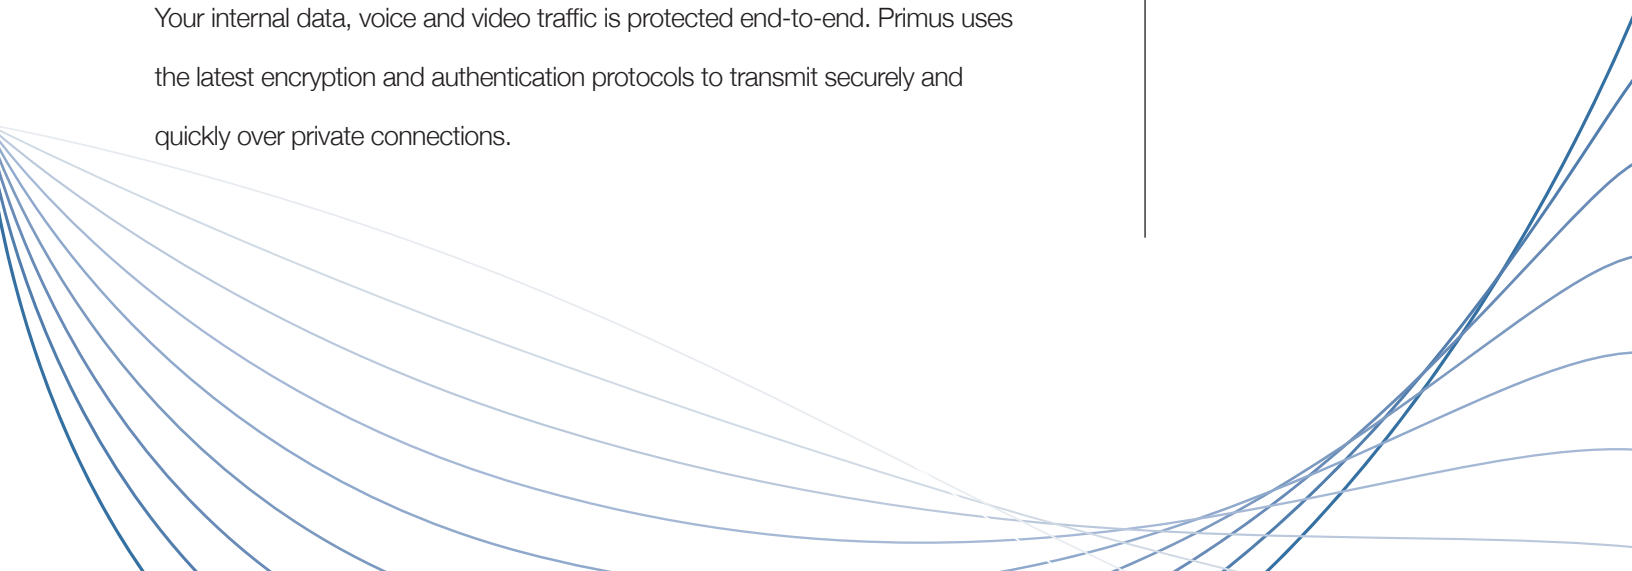

Does the success of your business depend on the ability to rapidly send large amounts of critical communications data? Whether you are transmitting voice, data or video, Primus offers one of the most reliable and high-quality private line portfolios in the industry, supplying your mission-critical business needs with flexible bandwidth, on demand, at speeds from 64 Kbps to 155 Mbps.

Your internal data, voice and video traffic is protected end-to-end. Primus uses the latest encryption and authentication protocols to transmit securely and quickly over private connections.

 *HIGH-SPEED
INTERNET*

 *SECURE
PRIVATE LINES*

 *sDSL SERVICE*

Primus has end-to-end control of our network traffic, which means that your business receives guaranteed service level agreements, backed by our 24x7x365 Network Operations Center that proactively monitors the network and handles service issues in real time. With a dual-homed, self-healing points of presence ATM-IP network, Primus is able to continuously provide uninterrupted private line service to customers around the globe.

With an extensive domestic and global network, Primus is able to expand your nationwide reach, improve business communications and save your business time and money.

Primus Business sDSL - Fast and Productive

Our Symmetric Digital Subscriber Line (sDSL) service is a high-speed, 24x7 service ideal for small to medium-sized businesses. Primus offers an all-inclusive sDSL plan: router, configuration and management—and a fast sDSL line.

Primus offers an array of sDSL Internet access bandwidth options from 144 Kbps to 1.5 Mbps. Primus optional speeds not only allow tailored solutions to fit your Internet access needs, it enables you to easily upgrade your bandwidth as your business grows. A Primus sDSL not only increases potential productivity, it saves your business valuable time.

Case Study: 'Home of the Brave' Movers

Serving the Texas market, 'Home of the Brave Movers' is a growing, full-service moving company. With employees constantly on the road, it depends on its phone system to keep it in touch with its customers wherever they are. Like many small businesses, 'Home of the Brave' had outgrown its phone service – but not its desire to save money.

The Solution: Primus XtensionSM Hosted PBX

Fortunately, the company was contacted by a Primus sales consultant just as it was considering alternatives to its existing telephone service. Primus proposed that the company implement its XtensionSM Hosted PBX solution. It allows businesses to consolidate their voice, Internet and email services into one cost-effective and reliable Internet connection – and it delivers over 20 advanced calling features via Primus' advanced Voice Over IP technology platform.

The Bottom Line: More Features—For A Lot Less Money.

According to 'Home of the Brave', the results were everything the company hoped for – and more. "I like the advanced features – like voice mails we can answer using email and the fact I can login anywhere I have Internet access – even on my PDA," says Ben Tucker, the company's owner. And the savings? "Let me put it this way. Our first two bills from Primus combined were less than just one month's bill with our old phone company. I've already recommended Primus to some of my friends," added Tucker.

 "We need a phone company that keeps us "on the move." With Primus' XtensionSM solution, we get great features like Internet voicemail and remote login, plus terrific customer service – all for about half of what we were paying with our old phone company."

Case Study: MDabroad

MDabroad is a fast-growing business that helps international medical care providers process benefit and claim materials globally. With offices in the U.S. and overseas and customers in over 40 countries, its telecom network is not only the backbone of its business – it is a symbol of the company's commitment to quality and service.

The Problem: A High-Cost Telecom Network

MDabroad was operating separate networks in each of its offices—one for its voice telephone services and another for its data, email and Internet services. "We had a traditional PBX and dedicated T-1 voice circuits in each of our offices, in addition to IP connections," explained Scott J. Rosen, President of MDabroad. "On top of that, we were paying high per-minute rates for all our international calling."

The Answer: Primus XtensionSM Hosted PBX + Primus Global Calling Plan

When a sales consultant from Primus contacted MDabroad, they were ready to listen. After analyzing MDabroad's requirements, Primus developed a custom solution combining Primus Xtension (SM) (SM), its innovative Hosted PBX solution, with a custom global calling plan using Primus' global network and international DID's that allow MDabroad's clients to call the company locally in key markets.

The Bottom Line: Big Savings, Great Features and Global Coverage

"With Primus, we traded in our PBX and dedicated T-1 lines for an easy-to-manage, feature-rich solution that uses one Internet connection for all our voice and data needs. Plus, we got a great international calling plan," said Rosen. "Best of all, they have cut our telecom costs by 75%. I would absolutely recommend Primus to any business."

"As a fast-growing business with customers in over 40 countries, we need global coverage, great customer support and competitive pricing. Primus' Xtension (SM) (SM) Hosted PBX has been the answer for us. Their team has been terrific. Best of all, they have cut our telecom costs by 75%. I would absolutely recommend Primus to any business."
